No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence (Sequence (Sequen

```
Oligonucleotides containing at least 1 unmethylated CpG dinucleotide affect the immune response in a subject by activating natural killer cells or redirecting a subject's immune response from a Th2 to a Th1 response by inducing monocytic and other cells to produce Th1 cytokines. These nucleic acids containing at least 1 unmethylated CpG can be used as

The method is for treating a subject having, or at risk of having an acute decrement in air flow, comprising administering a nucleic acid sequence containing at least one unmethylated CpG. The nucleic acids containing an unmethylated CpG the nucleic acids containing an unmethylated CpG this acids containing an unmethylated CpG this acids to a subject by activating natural killer cells (NK) or redirecting a subject's immune response from a Th2 cytokines. They can be used to treat pulmonary disorders having an immunologic component, such as asthma or environmentally induced airway disease. They can also be used to treat diseases associated with Gram-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           inflammatory bowel disease

AAV27641-751 represent immunostimulatory oligodeoxyribonucleotides (ODNs) of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: 5' NIXICGX2X12', where at least one uncleotide separates consecutive CpGs, X1 is adenine, guanine, or ucleotide separates consecutive CpGs, X1 is adenine, guanine, or thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGG tetramer or more than one CCG or CGG trimer OR 5' NIXIZCGX3X4N 3', where at least cone nucleotide separates consecutive CpGs, X1 and X2 are selected from CGT, GpG, GpA, ApT and ApA, X3 and X4 are selected from TpT or CpT, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 cone not contain a CCGG tetramer or more than one CCG or CGG trimer. The ODNs activate lymphocytes in a subject and redirect a subject's immune cresponse from a Th2 to a Th1 (e.g. by inducing monocytic cells and other cells to produce Th1 cycokines, including IL-12, IFN-gamma and GM-CSF).

The ODNs can be used to treat or prevent an asthmatic disorder, additional during antibody generation in a mammal such as a mouse or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinucleotide, used for treating e.g. tumours, infections

```
Sequences AA241856-Z41949 are phosphorothioate CpG oligonucleotides which are used in the invention comprises stimulating an immune response in a subject comprising administering to a subject exposed to an antigen, an immunopotentiating cytokine and an immunostimulatory CpG oligonucleotide to induce a synergistic antigen specific immune response. The methods are useful for treating cancer by stimulating an antigen specific immune response. The methods are useful for treating cancer by stimulating an antigen specific immune response. The methods are useful for treating cancer by stimulating an antigen specific immune carcinoma, fibroma, Lymphoma, melanoma, neuroblastoma, retinoblastoma, carcinoma, ilbroma, Lymphoma, melanoma, neuroblastoma, retinoblastoma, and glioma. The methods are also useful for treating infectious diseases, and glioma. The methods may also be useful for treating infectious diseases.

The methods and compositions may also be applied to treat cancer and tumours in non human subjects, e.g. cats and dogs. Neoplasias affecting espicitural livestock may also be treated and include leukaemia, haemanglopericytoma and bovine oclar neoplasia. Chronic, infectious, contagious diseases of sheep and goats caused by the bacterium of sheep caused by jaagsiekte may also be treated. Of oligonucleotides can be useful in activating B cells, MK cells, and antigen presenting calls, and antigen and antigen antibody and antibody and antigen presenting calls.
                                                                                                                                                                                              CpG oligonucleotide; phosphorothioate; interleukin-12; IL-12; secretion; human PBMC; immune response; cancer; HTV; bacterial disease; asthma; neoplastic disorder; jaagsiekte; B cell; NK cell; ss; cytokine; antigen presenting cell; infection; allergic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel synergistic combinations of immunostimulatory oligonucleotides and immunopotentiating cytokines are useful for stimulating the immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         dependent cellular cytotoxicity and can be used as an adjuvant in conjunction with tumour antigens to protect against a tumour challenge
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 20; DB 2; Length 20; Pred. Sequences AAZ41856-Z41949 are phosphorothioate CpG oligonucleotides which are used in the invention comprises stimulating an immune response in a subject comprising administering to a subject exposed to an antigen, an immunopotentiating administering to a subject exposed to an antigen, an immunopotentiating administering to a subject exposed to an antigen, an immunopotentiating administering to a subject exposed to an antigen, an immunopotentiating cytokine and an immunostimulatory CpG oligonucleotide con immunopotentiating cancer by stimulating an antigen specific immune response. The methods are useful for treating cancer by stimulating an antigen specific immune cancer antigen. The methods can also be used to treat cancer in the methods are also useful for treating infectious diseases, and glioma. The methods may also be used to treat allergic diseases, e.g. asthma. The methods and compositions may also be applied to treat cancer and tumours contradious diseases of sheep and goas Neoplasias affecting agricultural livestock may also be treated and include leukaemia, hamman subjects, e.g. cats and dogs. Neoplasias affecting agricultural livestock may also be treated and include leukaemia, contragious diseases of sheep and goats caused by the bacterium contrader and marrounders, and marrounders and marrounders, and mittigen presenting cells, and ham an unique presenting caused by laggiekte may also be treated. Orgo oligonucleotides can be contagious in activating Beells, NK cells, and antigen presenting cells, and antigen presenting cells, and mitigen presenting contagions diseases.
                                                                                                                                           CpG oligonucleotide; phosphorothioate; interleukin-12; IL-12; secretion; human PBMC; immune response; cancer; HIV; bacterial disease; asthma; neoplastic disorder; jaagsiekte; B cell; NK cell; ss; cytokine; antigen presenting cell; infection; allergic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel synergistic combinations of immunostimulatory oligonucleotides and immunopotentiating cytokines are useful for stimulating the immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            such as monocytes and macrophages. This sequence represents a CpG adjuvant that can be used in the vaccine composition of the invention. The vaccine comprises a polyoxyethylene ether or seter (I), not in the form of a vesicle, pharmaceutically acceptable excipient and an antigen (Ag) or antigenic composition. The vaccine can be used to treat or prevent infections (by bacteria, viruses or other parasites), allergy and cancer. (I), which are safe, easy to sterilize and simple to administer, are powerful vaccine adjuvants, able to induce a systemic immune response when administered (non-invasively) to the mucosa. The response is at least as good as that from conventional systemic injection. (I) are effective at low concentration, have low
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CpG-N motif; immunostimulation; antigen; CpG-S motif; immunisation; ODN; viral antigen; bacterial antigen; paralite; therapputic; growth factor; toxin; tumour suppressor; cytokine; apoptotic protein; interferon; hormone; clotting factor; ligand; receptor; oligodeoxynucleotide; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAX78791-X78801 represent nucleic acid sequences which encode novel constructs comprising an E6 or E7 protein or E6/E7 fusion protein from HPV (represented in AAY25375-Y25386). These constructs are optionally linked to an immunological fusion partner and an immunomodulatory CpG oligonucleotide. The products of the invention can be used to induce an immune response in a partient to an HPV antigen. They can also be used for preventing or treating HPV induced tumours. This sequence represents a CpG oligonucleotide which is used in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                             ANV74237-V74253 are oligodeoxynucleotide (ODN) primers used to describe a method for enhancing the immunostimulatory effect of an antigen encoded by nucleic acid contained in a nucleic acid construct. The method involves determining the CpG-N and CpG-S motifs present in the construct, removing neutralising CpG (CpG-N) motifs and optionally inserting stimulatory CpG (CpG-S) motifs in the construct, thereby producing a nucleic acid construct having enhanced immunostimulatory efficacy. The method can be used for immunisation against viral antigens, e.g. from hepatitis B virus (HBV), bacterial antigens or an antigen derived from a paraster. They can also be used for expression of a therapeutic
                                                                                                                                                                                                                                polypeptide, e.g. growth factors, toxins, tumour suppressors, cytokines, apoptotic proteins, interferons, hormones, clotting factors, ligands and receptors.                                                                                    AAV74237-V74253 are oligodeoxynucleotide (ODN) primers used to describe a
                                                                                                             method for enhancing the immunostimulatory effect of an antigen encoded by nucleic acid contained in a nucleic acid construct. The method by nucleic acid contained in a nucleic acid construct. The method removing acterning the CpG-N and CpG-S motifs and optionally inserting stimulatory CpG (CpG-N) motifs and optionally inserting atimulatory CpG (CpG-S) motifs in the construct, thereby producing a nucleic acid construct having enhanced immunostimulatory efficacy. The method can be used for immunisation against viral antigens, e.g. from hepatitis B virus (HBV), bacterial antigens or an antigen derived from a parasite. They can also be used for expression of a therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAV74237-V74253 are oligodeoxynucleotide (ODN) primers used to describe a method for enhancing the immunostimulatory effect of an antigen encoded by nucleic acid contained in a nucleic acid construct. The method involves determining the CpG-N and CpG-S motifs present in the construct,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptide, e.g. growth factors, toxins, tumour suppressors, cytokines, apoptotic proteins, interferons, hormones, clotting factors, ligands and receptors. The present sequence represent a specifically claimed CpG oligonucleotide. A vaccine composition comprising the formulation is used for inducing a immune response to T-independent type 1 or type 2 antigen or polysaccharide conjugate antigen. The use of immunostimulatory CpG oligonucleotide acts
removing neutralising CpG (CpG-N) motifs and optionally inserting stimulatory CpG (CpG-S) motifs in the construct, thereby producing a nucleic acid construct having enhanced immunostimulatory efficacy. The method can be used for immunisation against viral antigens, e.g. from hepatitis B virus (HBV), bacterial antigens or an antigen derived from a parasite. They can also be used for expression of a therapeutic polypeptide, e.g. growth factors, toxins, tumour suppressors, cytokines, apoptocic proteins, interferons, hormones, clotting factors, ligands and receptors. (Updated on 20-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A vaccine composition for inducing a immune response to T-independent type 1 or type 2 antigen or polysaccharide conjugate antigen.

This oligonucleotide contains a CpG motif. It was tested for its ability to act as an adjuvant for the M7A-alpha peptide (AAY42723), which can induce inflammatory cardiomyopathy (ICM) in mice. It was found to act as a potent immunostimulator, whereas a oligonucleotide from the same source which did not contain a CpG motif (AAZ28133) was hardly effective as an adjuvant. Inflammatory cardiomyopathy peptides (AAY42723, AAY42725-Y42731) can be used with such an adjuvant and an excipient in a vaccine for decreasing ICM
                                                                                                                                                                Chlamydia trachomatis outer membrane protein gene-derived CpG oligo 4.

                                                                                                                                                                                                                                                                                                                                                                                                                                           AAZ60933-Z61015 represent immunostimulatory stereoisomers of CpG oligomucleotides. The sequences are derived from generic nucleic acid sequences may also be derived. The immunostimulatory nucleic acids can be co-administered with an antigen to induce an antigen-specific immune response. The immunostimulatory nucleic acids can be co-administered with an antigen to induce an antigen-specific immune response. The immunostimulatory nucleic cards of an also be used in methods for redirecting a subject s immune response from a Th2 to a Th1, for treating asthma, for desensitising a subject against the occurrence of an allergic reaction in response to contact with an allergen, for activating an immune cell, especially a lymphocyte or a dendritic cell expressing a cancer antigen or for treating cancer. The immunoinhibitory nucleic acid can be used to prevent is excessive due to having received an immune response in the subject is excessive due to having received an immune stimulating compound. The immunoinhibitory nucleic acid can be used to treat a subject having or risk of an inflammatory disease, especially inflammatory bowel disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

AAZ60933-Z61015 represent immunostimulatory stereoisomers of CpG oligonucleotides. The sequences are derived from generic nucleic acid sequence, from which immunoshimbitory sequences may also be derived. The immunostimulatory nucleic acids can be co-administered with an antigen to induce an antigen-specific immune response. The immunostimulatory nucleic acids can also be used in methods for redirecting a subject withmune from a Th2 to an allergic reaction in response to subject against the occurrence of an allergic reaction in response to contact with an allergen, for activating an immune cell, especially a lymphocyte or a dendritic cell expressing a cancer antigen or for treating cancer. The immunoinhibitory nucleic acid can be used to prevent an immune response, especially where the immune response in the subject is excessive due to having received an immune simulating compound. The immunoinhibitory nucleic acid can be used to treat a subject having or at inflammatory disease, especially inflammatory bowel disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Haematopoiesis; regulation, CpG oligonucleotide; phosphorothioate; immune remodeling; thrombopoiesis; anaemia; immune system; cancer; immune response; allergic reaction; infectious disease; asthma; thrombocytopaemia; immunchaemolytic disorder; dasorder; haemoglobinopathy; kidney failure; chronic inflammatory disorder;

The present invention describes a method using CpG containing oligonucleotides (ONs) for regulating immune system remodeling and for city containing and for city containing and for city containing and comprises: (1) administering an ON having a sequence including at least 1 days after the ON is administered to the subject to antigen at least 3 days after the ON is administered to the subject to produce an antigen-specific immune response: 5' XICGX2 3' (1), where the ON = includes at least 8 nucleotides, C and G = unmethylated, and Xi and X2 = nucleotides. The method can be used for inducing an immune response against an antigen such as cells, cell extracts, proteins, polysaccharide conjugates, lipids, glycolipids.

CX = nucleotides. The method can be used for inducing an immune response against an autigen such as subject at risk of developing cancer or an illergens. It can be used in a subject at risk of developing cancer or allergerse. It can be used in a subject at risk of developing cancer or allerger reaction. It can also be used for treating an infectious disease, allergic diseases and asthma, as well as thrombocytopaenia which allerger induced due nuclimmune disorder such as aldiopathic thrombocytopenic purpura, or resulting from accidental or therapeutic cadiation exposure. It can also be used for treating anaemia such as fidney failure, and chemical adequate iron stores, chronic disease such as kidney failure, and chronic inflammatory disorder such as rheumatoid arthritis, or anaemia resulting from accidental or therapeutic radiation exposure. AZZ47932 to AZZ48029 represent phosphorothioate CGG oligonucleotides used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                           CpG containing oligonucleotides for, e.g. inducing an antigen-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 20; DB 3; Length 20; 100.0%; Pred. Sequence 90. Application US/09895007A

Factor No. US/0020165178A1

GENERAL INFORMATION:

APPLICANT: Schetter, Christian

APPLICANT: Betersen, Deanna M.

TITLE OF INVENTION: TREATMENT OF ANEMIA, THROMBOCYTOPENIA,

FILE REPERENCE: Clo41/7014 (AMS)

CURRENT APPLICATION NUMBER: US/09/895,007A

CURRENT PILING DATE: 2001-06-28

FRIOR FILING DATE: 2000-06-28

NUMBER OF SEQ ID NOS: 133

SOFTWARE: FastSEQ for Windows Version 3.0

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                       Sequence 86, Application US/09895007A

Sequence 86, Application US/09895007A

Patent No. US20020165178A1

GENERAL INFORMATION:

APPLICANT: Schetter, Christian

APPLICANT: Bratzler, Robert L.

APPLICANT: TILE OF INVENTION: IMMUNOSTIMULATORY NUCLEIC ACIDS FOR THE

TITLE OF INVENTION: IRRATMENT OF ANEMIA, THROMBOCYTOPENIA, TILLE OF INVENTION INTERER: 2001-06-28

CURRENT APPLICATION NUMBER: US 60/214,368
